

Knowledge Document for RAG Assistant

Profile

Computer Science graduate specializing in Artificial Intelligence and Machine Learning, with hands-on experience in computer vision, LLM pipelines, and model deployment. Passionate about building innovative AI solutions and eager to apply technical expertise and problem-solving skills to real-world projects. Dedicated to continuous learning and adapting to new technologies to stay ahead in the AI field.

Skills

- Deep Learning and Neural Networks - Computer Vision - Generative AI - Explainable AI (XAI) - LLM & Chatbot Development (LLM APIs, fine-tuning, Transformer architectures) - RESTful API design and LangChain/LlamaIndex pipelines (RAG) - Git/GitHub, Figma, Canva, Adobe Photoshop - Workflow automation using n8n - Adaptability to emerging technologies

Work Experience

AI Engineer Intern – Cortech Sols (Current)

- Developing and testing AI models for real-world business applications in computer vision and NLP. - Assisting in data collection, cleaning, and annotation for training datasets. - Supporting model evaluation, fine-tuning, and deployment with modern tools. **Web**

Development Intern – Digital Empowerment Network (2023-2024)

- Built responsive interfaces with HTML, CSS, JavaScript, React.js, and Node.js/Express. - Gained teamwork and collaboration skills, sparking interest in AI/ML. **Transcription Work**

(Remote)

- Structured audio/video datasets for AI/ML training. - Delivered high-quality transcripts with formatting and speaker labeling under strict deadlines.

Education

Bachelor of Computer Science (2021-2025) Foundation University of Science and Technology

Technical Projects

Football Analysis System - Final Year Project

- Applied computer vision (OpenCV + YOLO) to analyze football footage. - Extracted metrics like speed, possession time, and tactical heatmaps. - Trained an I3D-based model for goal detection (78% accuracy). **Gemini Chatbot with RAG**

- Built a chatbot using Google Gemini + Retrieval-Augmented Generation (RAG). - Implemented with FastAPI backend and ElectronJS frontend for persistence. **Fire Detection System**

- Developed YOLOv8-based fire detection system (89% accuracy). - Integrated with FastAPI + ElectronJS for real-time alerting. **Number Plate Detection System**
- Built an automatic license plate detection system for a client. - Contributed to dataset preparation, training, and real-time deployment.

Certifications

- AI for Beginners (HP Foundation) - Data Science & Analytics (HP Foundation)
